Key Benefits

- ✓ 2mm High Impact Acrylic
- ✓ 130mm 'effective light area'
- ✓ Opal colour to reduce heat transfer while allowing light to filter in the space
- ✓ Available in a range of lengths: 4, 5, and 6 meters
- ✓ Universal ceiling panel suitable for Trimlink and Corrugated profiles
- ✓ Two panel (roof and ceiling) system to prevent condensation build up

Apollo Skylights are a superior product made from high impact acrylic to increase longevity and maintain strength over long spans.

The Skylights provide a natural light panel solution for Trimlink and Corrugated Apollo Insulated Roofing, reducing dependence on artificial light and therefore electricity. Our Skylights let sunlight into the covered space, while keeping the area protected from the weather and heat.

With a sleek, modern design, skylights complement a wide range of traditional and modern roof designs and projects.

Designed for easy installation, the Apollo Skylights fit between the insulated roof panels to form a seamless and waterproof ceiling without additional screw fixings.

Nitrile foam inserts block off each end, providing a tight seal to protect from dust, water, insects and pests, and prevents a build-up in leaves and debris.

** Corrugated acrylic top not supplied by Apollo Roofing Solutions.*

15-YEAR WARRANTY

Manufactured and tested for lasting quality and peace of mind.

MINIMAL MAINTENANCE

Durable, fade resistant, easy to clean surface.

SUPERIOR STRENGTH

Made from high impact acrylic, light weight but strong over long spans.

THERMAL RATING

UV stabilised to reduce heat transfer while letting sunlight filter in.

IMPROVED EFFICIENCY

Easily fits into the roof panels to form a weatherproofing ceiling.
